

## COMPETITION WINNER

Michael Kearney of Burlington Engineering, the winner of our Spring Competition being presented with the 12 bottle case of wine by Brian Scott, Managing Director of Vistec Ltd.

The competition proved a bit easier this time. There were fourteen correct entries. So this time we will try and get a happy medium - not too difficult and not too hard. The winner will be informed at the start of December – just in time for the Christmas Party – the case of wine might well add to the Festive Cheer, so how about a joint effort by all the firm?

## INSIDE

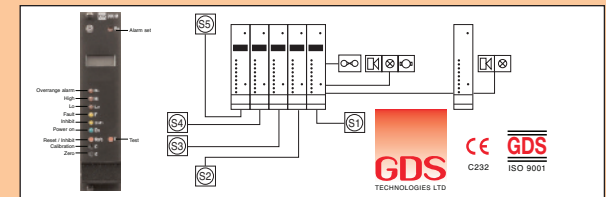

### GDS 2010

An excellent solution to large complex Gas Detection situations

- Flammable, oxygen or toxic gases
- Wide range of enclosures, wall-panel mounting, desktop or floor standing
- 3 adjustable alarm trip points
- Unlimited number of sensor points
- 3 alarm relays per module
- Standby battery charger module
- High integrity system
- 4 – 20mA output per module

**GDS2010**  
Multi Channel Gas Monitor

### FIREWATCH MARK 6

A pressure drop system specifically designed for addressing the common problem of nuisance alarms in kitchens.

### VALVES

New range of Anello automatic re-setting valves available shortly.

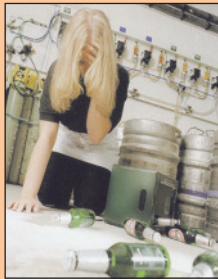

### ANALOX

Solution to Carbon Dioxide dangers in pub cellars.

**COMPETITION  
WIN WINE!  
SEE INSIDE**

## DANGER IN THE PUB

Pub Cellars are dangerous places. Carbon Dioxide is used as a dispense gas and is a hazardous substance and highly toxic. The ANALOX unit is specifically designed for pub cellars. Carbon Dioxide is odourless and tasteless at levels that effect the human body – as little as 2% is a health risk. Don't let the unthinkable happen! Contact Vistec for more information.

**ANALOX**

## KITCHEN PROBLEMS – NEW PRODUCT

### FIREWATCH MK 6

Many kitchens use gas and nuisance alarms with conventional gas detection systems are a common problem.

TCW have now introduced a unit specifically for kitchens – the **FIREWATCH MK 6**. To prevent nuisance shutdown and to provide early warning of any of low airflow within the ductwork, the Mark 6 is provided with the option to connect 2 flow monitoring switches on the inlet fan, and 2 switches on the exhaust fan. Should any of the flow switches indicate a loss of air flow a warning light comes on upon the panel and an audible alarm sounds. The audible alarm may be silenced with the mute button and the gas cookers used normally until the maintenance engineers can rectify the problem. Should the second flow monitoring device fail, the gas will be shut off until the fault is rectified.

## GDS 2010

The GDS 2010 has been designed with features that will provide an effective response to the detection and control of gas hazards in a wide range of industrial environments from boiler plant rooms to offshore petrochemical installations.

The systems is offered in a wide range of enclosures, from single module din rail mounting to multi-channel interconnected 19 inch rack based tower systems of unlimited size.

Each alarm module operates independently having alarm status indicators, sounder and three alarm levels with individual relays for the control of remote safety systems. 40-20mA or 0-10V outputs are available for use in proportional control systems such as speed control of extractor fans.

Common alarm relays and indicators are available via an optional facilities module which can be plugged into any available module socket on the system. The facilities module can also be used remotely as a control and status indicator panel, having built-in sounder with sounder accept and alarm reset functions.

The advanced features designed into the GDS 2010 system ensure ease of maintenance and provide the highest integrity rating, with the minimum loss of sensor cover should a fault condition occur.

## NEW PRODUCT

Vistec Ltd has been supplying the full range of the competitive Anello manual re-set valves for nearly eight years. During the past two years there has been an increasing demand for automatic re-setting slam shut valves.

Recently the Italian company Anello has been taken over by the large American company 'Watts Industry Group'. The range of products has been expanded to include automatic re-setting slam shut valves. Vistec is pleased to announce that technical details and prices will be available shortly.

## ADVANCE NOTICE

Due to an increase in business, Vistec is planning to advertise for a new Technician. So who are we looking for? We have two Johns already which can cause confusion . . . so if your name is John it doesn't look good. We want someone like Ronan, so we were thinking about Ronan's son – but he hasn't got a car – his name is John – and he's only five – so we think that's out! So we want someone who will fit into a close knit team, someone who can work on their own initiative and provide excellent customer service – some electronics background useful but full training will be given – only a modest salary but good long term prospects.
